

seereference.com Risk Register

1. Purpose

This Risk Register identifies potential risks that may affect the development, launch, and growth of the seereference.com AI-assisted engineering ecosystem.

The purpose is to establish mitigation strategies and maintain project resilience.

2. Technical Risks

Risk: AI Technology Complexity

Description:

Developing reliable AI systems requires continuous research, testing, and optimisation.

Impact:

High

Mitigation:

- Use modular architecture
 - Begin with MVP features
 - Continuously improve AI workflows
 - Evaluate suitable AI technologies
-

Risk: Infrastructure Scalability

Description:

Growing user demand may increase computing and hosting requirements.

Impact:

Medium

Mitigation:

- Use scalable cloud infrastructure
 - Monitor system performance
 - Optimise resource usage
-

3. Data Security Risks

Risk: Protection of User Information

Description:

Knowledge management systems require strong privacy and security controls.

Impact:

High

Mitigation:

- Apply security best practices
 - Protect user data
 - Implement access controls
 - Follow privacy requirements
-

4. Market Risks

Risk: Strong Competition

Description:

The AI industry contains many established companies and platforms.

Impact:

High

Mitigation:

- Focus on specialised engineering and knowledge solutions
 - Build unique user value
 - Continuously improve products
-

5. Financial Risks

Risk: Limited Funding

Description:

Insufficient funding may slow development.

Impact:

High

Mitigation:

- Prioritise MVP development
 - Control operational costs
 - Seek strategic investment partnerships
-

6. Operational Risks

Risk: Development Delays

Description:

Technology projects may experience delays.

Impact:

Medium

Mitigation:

- Use milestone-based development
 - Maintain clear priorities
 - Review progress regularly
-

7. Compliance Risks

Risk: Regulatory Requirements

Description:

AI systems may require compliance with changing regulations.

Impact:

Medium

Mitigation:

- Monitor regulations
 - Design responsible AI practices
 - Maintain transparency
-

8. Risk Management Approach

seereference.com will manage risks through:

- Regular project reviews
- Security-focused development
- User feedback

- Agile improvement cycles
-

Document:

Risk Register
